In Nazi Germany, Hitler portrayed the Jews as vermin and six million people were killed. Metaphors can make the unreasonable seem reasonable, the illegitimate appear legitimate, and good people turn evil. Top speechwriter Simon Lancaster goes on a mission to explore how metaphors are used and abused today. From Washington to Westminster, Silicon Valley to Syria, Glastonbury to Grenfell, he discovers the same images being used repeatedly. Scum! Bitch! Vegetable! Whilst vulnerable groups are dehumanised, the powerful are hailed as stars, angels or even gods. Prepare to take a journey into the surreal. This book raises profound questions about the power of language and the language of power. You will never think about words in the same way again.

Whether your search is limited to a single database or is as expansive as all of cyberspace, you won't find the intended results unless you use the words that work. Now in its second edition, Sara Knapp has updated and expanded this invaluable resource. Unlike any other thesaurus available, this popular guide offers a wealth of natural language options in a convenient, A-to-Z format. It's ideal for helping users find the appropriate word or words for computer searches in the humanities, social sciences, and business. The second edition has added more than 9,000 entries to the first edition's extensive list. Now, the Thesaurus contains almost 21,000 search entries! New or expanded areas include broader coverage of business terms and humanities-including arts literature, philosophy, religion, and music.

Current guide (1) to the library use of the literature of the biological sciences and related areas, and (2) to the proper reporting of research to the scientific community. Classified arrangement under such topics as bibliographic form, ready reference works, literature of taxonomy, and searching the literature. References are included with chapters. General index. 1st ed., 1942; 8th ed., 1972.

The field of engineering is becoming increasingly interdisciplinary, and there is an ever-growing need for engineers to investigate engineering and scientific resources outside their own area of expertise. However, studies have shown that quality information-finding skills often tend to be lacking in the engineering profession. Using the Engineerin

With the encroachment of the Internet into nearly all aspects of work and life, it seems as though information is everywhere. However, there is information and then there is correct, appropriate, and timely information. While we might love being able to turn to Wikipedia® for encyclopedia-like information or search Google® for the thousands of links on a topic, engineers need the best information, information that is evaluated, up-to-date, and complete. Accurate, vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans. While the award-winning first edition of *Using the Engineering Literature* used a roadmap analogy, we now need a three-dimensional analysis reflecting the complex and dynamic nature of research in the information age. *Using the Engineering Literature, Second Edition* provides a guide to the wide range of resources available in all fields of engineering. This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering. The information age has greatly impacted the way engineers find information. Engineers have an effect, directly and indirectly, on almost all aspects of our lives, and it is vital that they find the right information at the right time to create better products and processes. Comprehensive and up to date, with expert chapter authors, this book fills a gap in the literature, providing critical information in a user-friendly format.

This volume constitutes the proceedings of the Third International Workshop of the European Association for Machine Translation, held in Heidelberg, Germany in April 1993. The EAMT Workshops traditionally aim at bringing together researchers, developers, users, and others interested in the field of machine or computer-assisted translation research, development and use. The volume presents thoroughly revised versions of the 15 best workshop contributions together with an introductory survey by the volume editor. The presentations are centered primarily on questions of acquiring, sharing, and managing lexical data, but also address aspects of lexical description.
