Is mathematics a discovery or an invention? Do numbers truly exist? What sort of reality do formulas describe? The complexity of mathematics - its abstract rules and obscure symbols - can seem very distant from the everyday. There are those things that are real and present, it is supposed, and then there are mathematical concepts: creations of our mind, mysterious tools for those unengaged with the world. Yet, from its most remote history and deepest purpose, mathematics has served not just as a way to understand and order, but also as a foundation for the reality it describes. In this elegant book, mathematician and philosopher Paolo Zellini offers a brief cultural and intellectual history of mathematics, ranging widely from the paradoxes of ancient Greece to the sacred altars of India, from Mesopotamian calculus to our own contemporary obsession with algorithms. Masterful and illuminating, *The Mathematics of the Gods and the Algorithms of Men* transforms our understanding of mathematical thinking, showing that it is inextricably linked with the philosophical and the religious as well as the mundane - and, indeed, with our own very human experience of the universe.

This second collection of essays by Lewis focuses on causation probability, dependence and decision, and several other related topics. The thirteen papers are a major contribution to philosophy by one of the most influential and imaginative of contemporary American philosophers.

In this short, lucid, rich book Michael Dummett sets out his views about some of the deepest questions in philosophy. The fundamental question of metaphysics is: what does reality consist of? To answer this, Dummett holds, it is necessary to say what kinds of fact obtain, and what constitutes their holding good. Facts correspond with true propositions, or true thoughts: when we know which propositions, or thoughts, in general, are true, we shall know what facts there are in general. Dummett considers the relation between metaphysics, our conception of the constitution of reality, and semantics, the theory that explains how statements are determined as true or as false in terms of their composition out of their constituent expressions. He investigates the two concepts on which the bridge that connects semantics to metaphysics rests, meaning and truth, and the role of justification in a theory of meaning. He then examines the special semantic and metaphysical issues that arise with relation to time and tense. On this basis Dummett puts forward his controversial view of reality as indeterminate: there may be no fact of the matter about whether an object does or does not have a given property. We have to relinquish our deep-held realist understanding of language, the illusion that we know what it is for any proposition that we can frame to be true independently of our having any means of recognizing its truth, and accept that truth depends on our capacity to apprehend it. Dummett concludes with a chapter about God.

Celebrates the 50th anniversary of the publication of one of the most important philosophical works in the 20th century with essays by most of the leading figures in contemporary hermeneutic theory.

In a unique cooperation between philosophy, linguistics, art history, and ancient studies, this volume focuses on ways in which the entangled and embodied nature of image and language enables us to symbolically articulate the world and our experience in a great variety of forms. It lays the foundation for a new cultural anthropology of symbolic processes.

The spirit of this book is explorative. It meets the contemporary challenge posed by experience and truth with a critical openness that allows for the full complexity of these concepts to be investigated. The distinction between experience and truth has become subject to finitude; how then can these words and concepts be defined? What might be understood by experience and truth, when the distinction between them is not transformed once and for all (eternally), but once and again (historically)? The contributors to the book investigate a wide range of questions revolving around this challenge to the contemporary understanding of experience and truth. They do so through the perspectives of phenomenology and hermeneutics, while also shedding new light on phenomenological and hermeneutic thought as such - on the distinction between phenomenology and hermeneutics, as well as on the interrelation between such philosophical thought and other fields of thought and culture.
